Abstract:	<p>At a time when the world is increasingly connected, we applaud Lau &amp; Shaffer's (2021) effort to shed novel light on the impact of globalization on domestic employees. Despite its merits, we observe two critical theoretical omissions, and interrelated conceptual irregularities in the authors' treatment of domestic employees and their resources, that may threaten the utility of their work. Overlooking theoretically relevant complexity of the phenomenon, the authors treat resources as exogeneous to specific cultural features of domestic employees and the globalization agent in question. Such a view fails to capture cultural contingencies of resources, making the model unfortunately incomplete. With the aim of ensuring sound theory building, we discuss the authors' treatment of domestic employees and their resources, and show how addressing them may contribute to stronger theorization.</p>

3 At a time when the world is increasingly connected, we applaud Lau & Shaffer's (2021)  
4 effort to shed novel light on the impact of globalization on domestic employees. Skillfully  
5 connecting Berry's (1997) acculturation framework and Hobfoll's (1989) conservation of  
6 resource theory, the authors propose a typological model that aims to explain domestic  
7 employees' acculturation stress and adaptation approaches in the context of globalization.

14 Despite its merits, we observe two critical theoretical omissions, and interrelated conceptual  
15 irregularities in the authors' treatment of domestic employees and their resources, that may  
16 threaten the utility of their work. Overlooking theoretically relevant complexity of the  
17 phenomenon, the authors treat resources as *exogeneous* to specific cultural features of  
18 domestic employees and the globalization agent in question. Such a view fails to capture  
19 cultural contingencies of resources, making the model unfortunately incomplete. With the  
20 aim of ensuring sound theory building, we discuss the authors' treatment of domestic  
21 employees and their resources, and show how addressing them may contribute to stronger  
22 theorization.

#### 35 INITIAL CULTURAL STATE OF DOMESTIC EMPLOYEES

36  
37 Although at first glance, the concept of domestic employees looks simple and  
38 straightforward, it becomes nebulous under further scrutiny. Lau & Shaffer (2021) contrasted  
39 domestic employees with global employees and define domestic employees as "those who  
40 were born and have continued to reside in the same country". They further commented, on  
41 multiple occasions, that domestic employees may "never leave their home countries",  
42 assuming a state of cultural *purity* in them. Yet, even without leaving their home country,  
43 domestic employees may have had complex cultural background and exposure that would  
44 have shaped the initial state of their cultural selves, prior to the specific episode of  
45 globalization under study. Take the example of Canada, evoked by Lau & Shaffer. As a  
46 country of migrants, Canadian domestic employees may have Mexican, Chinese, French, or  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 other cultural backgrounds. Even if they have never left Canada, they may have prior  
4  
5 exposure to more than one culture and, accordingly, may have developed requisite sets of  
6  
7 resources and attitudes to approach globalization (as compared to domestic employees with  
8  
9 singular cultural backgrounds). Therefore, clarification of the initial cultural state of domestic  
10  
11 employees is critical for a more complete modelling of their adaptation responses to  
12  
13 acculturation stress. Furthermore, even domestic employees who have the same types of  
14  
15 cultural exposure may hold different attitudes toward foreign cultures and globalization. Take  
16  
17 the example of Romanian domestic employees (Caprar, 2011) cited by Lau & Shaffer. Some  
18  
19 Romanian domestic employees felt like “foreign locals” (Caprar, 2011) though having never  
20  
21 left their countries. It was therefore easier for them to develop an American identity when  
22  
23 working for American MNCs, and to take a positive view toward globalization.  
24  
25  
26  
27

28  
29 The foregoing indicates that domestic employees of the same country can possess  
30  
31 diverse initial states in terms of their relationship with multiple cultural entities involved in  
32  
33 globalization, such as home culture (e.g., Romanian), the culture of the globalization agent in  
34  
35 question (e.g., American), and even the global community (e.g., global identity; Arnett,  
36  
37 2002). When they hold positive inclinations toward the culture of the globalization agent or  
38  
39 toward the global community, domestic employees would experience less identity threat  
40  
41 (Molinsky, 2007; Petriglieri, 2011) and can proactively embrace globalization, instead of  
42  
43 feeling forced to respond to the oppressing force of globalization, as depicted in Lau &  
44  
45 Shaffer (2021). The authors’ formulation assumes cultural *homogeneity* of domestic  
46  
47 employees and therefore failed to capture the discussed complexities.  
48  
49  
50

51  
52 Ignoring the inherent complexity in domestic employees’ initial cultural state is not  
53  
54 trivial, and may threaten the validity of conclusions in two ways. First, failing to account for  
55  
56 relevant initial conditions of domestic employees may lead to endogeneity problems  
57  
58 (Antonakis, Bendahan, Jacquart, & Lalive, 2010), such that outcomes (e.g., adaptation  
59  
60

1  
2  
3 approaches) are largely attributable to an initial state omitted in the model, instead of the  
4  
5 theorized antecedents (Wooldridge, 2005). This obscures the effect of cultural contingencies  
6  
7 on resources (which we will discuss in more detail later) and compromises the soundness and  
8  
9 validity of the theory. Second, Lau and Shaffer's (2021) implicit assumption of cultural  
10  
11 purity and homogeneity depicts an oversimplified picture about domestic employees, so that  
12  
13 the theory may be valid only for a rather limited subset of domestic employees in terms of  
14  
15 how they experience and respond to acculturation stress in the face of globalization. As such,  
16  
17 this threatens the generalizability and ecological validity of the proposed framework.  
18  
19

20  
21 One promising way to capture the complexity of domestic employees is to explicitly  
22  
23 model their initial *cultural embeddedness*, defined as the extent to which an individual is,  
24  
25 both objectively and subjectively, associated with, hence is enabled and constrained by  
26  
27 specific social and cultural institutions (Hinds, Liu, & Lyon, 2011; Seo & Creed, 2002).  
28  
29 Cultural embeddedness is often shaped by individuals' objective life events and manifests as  
30  
31 subjective psychological appreciation and association with a specific cultural entity. Its  
32  
33 pattern varies in plurality (i.e., the number of cultures one is associated with) and strength  
34  
35 (i.e., how strongly one is embedded in each cultural entity). In our opinion, when studying  
36  
37 globalization and acculturation, it would be fruitful to consider that individuals' relationships  
38  
39 to cultures are "not categorical but rather are partial and plural" (Morris, Chiu, & Liu, 2015:  
40  
41 631), for domestic and global employees alike. Domestic employees can hold rather complex  
42  
43 patterns of cultural embeddedness as a result of their cultural upbringing and exposure at the  
44  
45 initial state of acculturation.  
46  
47  
48  
49

50  
51 In particular, cultural identity and identification can serve as useful lenses for  
52  
53 modelling cultural embeddedness, thereby capturing the initial cultural state of domestic  
54  
55 employees and more accurately predicting their resources in the face of globalization.  
56  
57 Domestic employees' initial cultural embeddedness may manifest in their degrees of  
58  
59  
60

1  
2  
3 identification with their home culture vis-à-vis the culture of the globalization agent (e.g., the  
4 American MNCs; Caprar, 2011), as well as their degrees of identification with the global  
5 community (e.g., global identity; Arnett, 2002). Apart from individuals' ability to hold  
6 multiple cultural identities (Chao & Moon, 2005; Ramarajan, 2014), it is shown that domestic  
7 employees can develop a global identity (i.e., a sense of belongingness and identification  
8 with the global work context) without having worked abroad (Erez, Lisak, Harush, Glikson,  
9 Nouri & Shokef, 2013). Domestic employees with different initial cultural states would likely  
10 experience acculturation stress in distinct ways in the face of globalization. Therefore,  
11 accounting for diversity in domestic employees offers more fruitful theorizing to explain their  
12 acculturation and adaptation processes in the context of globalization.

#### 26 CULTURAL CONTINGENCIES OF RESOURCES

27  
28 Resources are a key construct of Lau and Shaffer's model. According to the authors,  
29 resources moderate the relationship between globalization and acculturation stress as well as  
30 the subsequent adaptation approach. Given the critical role of resources in this model,  
31 however, it is unfortunate that the authors offer no explanations on why some domestic  
32 employees manage to conserve them and some fail to do so. In this regard, the model falls  
33 short in its utility to explain and predict (Bacharach, 1989). The authors' treatment of  
34 domestic employees and globalization leaves us blind to the relationship between individuals'  
35 initial cultural embeddedness and their cultural resources (Swidler, 1986). In our view, this is  
36 a missed opportunity, on two interrelated fronts.  
37  
38  
39  
40  
41  
42  
43  
44  
45  
46  
47  
48

49 First, the model's lack of precision in conceptualizing globalization is problematic for  
50 understanding cultural contingencies of resources in the acculturation process. Throughout  
51 the paper, the authors frequently shifted levels of analysis in their arguments about  
52 globalization, creating confusion about what domestic employees are to acculturate to: (1) an  
53 abstract concept of globalization in general (e.g., the box in Figure 1), (2) specific countries  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 (e.g., USA or China in the examples about USMCA and Uyghurs respectively), or (3)  
4  
5 organizations that expand across borders (e.g., international joint venture and M&A).  
6  
7 Meanwhile, domestic employees' experiences of resource gains or losses, as well as their  
8  
9 adaptation approaches, may partly depend on cultural features of the globalization agent. For  
10  
11 instance, for Algerian domestic workers, the acculturation dynamic would be very different  
12  
13 when the globalization agent is French, Chinese, or Moroccan, due to a mixture of cultural,  
14  
15 historical, and geopolitical factors. Furthermore, one key insight from research on liabilities  
16  
17 (and assets) of foreignness and localness (Kostova & Zaheer, 1999; Edman, 2016; Gyamfi &  
18  
19 Lee, 2019) is that one's assets and liabilities (i.e., resources) relative to cultural others are  
20  
21 highly contextual, depending on the specific cultures involved. It is therefore important to  
22  
23 properly operationalize who or what the globalization agent is, so that the discussion could be  
24  
25 pegged at defined levels of analysis and could account for dynamics stemming from the  
26  
27 globalizing agent's nationality, in relation to the acculturating party.  
28  
29  
30  
31  
32

33         Second, research has shown how resources can be associated with identities (Caza,  
34  
35 Moss, & Vough, 2018; Creary, Caza, & Roberts, 2015), suggesting that domestic employees'  
36  
37 initial cultural embeddedness may to some extent shape their resource endowment and by  
38  
39 extension, their acculturation stress, facing globalization. Take examples of the resources  
40  
41 proposed by Lau & Shaffer (i.e., social dominance, ethnocentric orientation, social capital,  
42  
43 and absorptive capacity): social dominance may be influenced by the power position of  
44  
45 domestic workers' culture relative to the globalization agent (Gyamfi & Lee, 2019; Paunova,  
46  
47 2017). Ethnocentric orientation can be a function of domestic employees' home country  
48  
49 embeddedness (Thomas, 1996). Similarly, domestic employees' social capital is related to  
50  
51 their specific pattern of cultural embeddedness (Repke & Benet-Martínez, 2018). Their  
52  
53 identity patterns may predict cultural intelligence, indicating their absorptive capacity when  
54  
55 navigating culturally diverse workplaces (Lee, Masuda, Fu, & Reiche, 2018). In sum,  
56  
57  
58  
59  
60

1  
2  
3 enhancing theoretical precision about domestic employees and globalization offers greater  
4 insight into *endowment* of and *change* in domestic employees' resources (in terms of both  
5 gain and loss), and their resulting adaptation approaches, in specific globalization contexts.  
6  
7

## 10 CONCLUSION

11  
12 In this dialogue, we point out two critical issues in Lau & Shaffer's (2021) work,  
13 emphasizing the theoretical importance of modelling initial cultural states of domestic  
14 employees and specifying the globalization agent so as to (1) include theoretically-relevant  
15 initial conditions in the model, and (2) enable plausible explanations of cultural contingencies  
16 of resources. As Weick (1999: 800; quoting Thorngate, 1976) put it: "In order to increase  
17 both generality and accuracy, the complexity of our theories must necessarily be increased".  
18  
19 Recognizing the value of parsimony and simplicity in theorizing, we nevertheless believe  
20 such a tradeoff necessary, and we encourage more precise theorization about domestic  
21 employees' cultural resources. At a time when forces for de-globalization are gaining  
22 strength (Witt, 2019), the world is particularly in need of strengthened cross-border  
23 collaboration to solve grand challenges of humanity. Scholarly work such as Lau and  
24 Shaffer's (2021) is therefore essential, and can be strengthened further through a more  
25 nuanced treatment of domestic employees and their resources for acculturation.
